Get Started

Welcome to the Any Video Converter Free Guide! Here we help you how to convert videos, download online videos, edit videos, and burn videos to DVD on your PC.

Step 1: Download the Installation Package

https://www.any-video-converter.com/download-avc-free.html.

Step 2: Install Any Video Converter Free

Double-click the setup file.

📙 🖉 🛄 🖛	Manage	Downloads				_		×
File Home Share View Image: Share Image: Share View Image: Share Image: Share Image: Share Image: Share Image: Share Image: Share	Application Tools	Delete Rename	New item •	Properties • History	Select all Select none			^ ()

Convert Video & Audio

- Convert Video
- Customize Video
- Select & Add Audio
- Select & Add Subtitles

Part 1: How to Convert Video

Step 1: Add Video

Click the "Add Video(s)" button to load video/audio files from your PC, or directly drag media files to the main interface.

Then the added video/audio files will be displayed as the screenshot shows.

Step 2: Select Output Profile

Click the drop-down menu under the **Output Profile**, and then click the format or device icon to unfold the output format list.

You can also click to the **Device** icon to directly convert video to fit your portable devices like iPhone, iPad, Android phone or tablet, TV, Xbox One, Sony PS4, etc. Or click icon to convert video/audio to MP3, AAC, FLAC, WAV, WMA, OGG, AC3.

Step 3: Start Conversion

Simply hit the "Convert Now!" button to start the video conversion.

In a while, once the conversion completes, the Output Folder will be prompted automatically to show the converted files. The Free version enables you to convert all videos in full length, and convert each DVD Disc for 3 minutes for free, so if you want to unlock this limitation, you can upgrade to the Pro version at \$9.95 for 1 year and \$39.95 for a lifetime.

https://www.any-video-converter.com/buynow/buy_video.html

Part 2: How to Customize Video

If you choose Customized MP4, AVI, WMV, M4V as the output format, you are also allowed to customize the output settings including Video Size, Quality, Video Codec, Video Bitrate, Constant Quality, Frame Rate, Video Aspect, Encode Pass, Audio Codec, Audio Bitrate, Sample Rate, and Channel.

Basic Settings			Video Options				Audio Options				
File Name:	Medici.S03E01.1080p		Video Codec:	x264		•	Audio Codec:	mp3		•	
Output Folder:	D:\videos\MP4		Video Bitrate:	-1		٠	Audio Bitrate:	128		٥	
All Clip Duration:	00:50:45.3		Constant Quality:	18		٥	Sample Rate:	44100		•	
Start Time:	00:00:00		Frame Rate:	29.97			Audio Channel:	2		•	
Stop Time:	00:50:45.3		Video Aspect:	Auto			Disable Audio:	Disable			
Video Size:	1920x1080 -	٠	Encode Pass:			•					
Quality:	High (Larger file size)										

If there is button under the drop-down list of Video Size, Video Bitrate, Constant Quality, and Audio Bitrate, you can simply click and customize Video Size or Bitrate manually.

Part 3: Select & Add Audio and Subtitles

- Select Internal Audio Track
- Add External Audio Track

1. Select Audio Track

Step 1: Click the "Add Video(s)" button to load video files from your PC.

Step 2: Click the audio track on the track view panel of the program to select the internal Audio Track from the list.

2. Add External Audio Track

Step 1: Click the "Add Video(s)" button to load video files from your PC.

Step 2: Click the audio track on the track view panel of the program and select "**Add Audio**" from the list.

Part 4: Select & Add Subtitles

- Select Internal Subtitle
- Add External Subtitle

1. Select Internal Subtitle

Step 1: Click the "Add Video(s)" button to load video files from your PC.

Step 2: Click subtitle on the track view panel of the program to select your desired subtitle from the list.

2. Add External Subtitle

You can either download a .srt or .ass file from the website and then modify it or create .srt or .ass format subtitles on your own with Notepad ++.

Step 1: Click the "Add Video(s)" button to load video files from your PC.

Step 2: Click subtitle on the track view panel of the program and select "**Add Subtitle**" from the list.

Step 3: Click the **b**utton and select **Subtitles** Option, then change Subtitle Encoding, Position, Size, Color, and Font.

- Clip a Video into Segments
- Merge Files into One
- Crop Video
- Flip or Rotate Video
- Apply Effects to Video
- Add Watermark to Video

Before starting the video conversion, you can personalize your videos with the built-in video editor. All you need to do is to click icon to open the video editing window.

Step 1: Click *icon on the track view panel to enter the "Video Editor"* window.

✔ Game.of.Thrones.S02.Ep08.1080p.DTS.x264 ✔ ● 00:53:21.2 Ħ H264 1920x1080 23 FP5 > ● DTS 48 KHz 1536 Kbps 6 C							5 >	6 × ·	+ 😣	
	() 00:53:21.2	Ħ H264		> 🔽	1	DTS 48 KHz 1536 Kbps 6 C 🝷	ø	Subtitle 1 (Clip this item	

Step 2: From the timing window, move your mouse to the start spot you want on the progress bar and click the **button**; then move your mouse to the end spot and click the **button**.

Step 3: Click the button, and repeat step 2 to trim another segment.

Step 4: Click "**Apply**" to enable the setting and click "**OK**" to return to the main window. To save the clipped segments, you will need to choose an output format and convert the clipped videos.

Part 2: Merge Files into One

Step 1: Click the "**Add Video**(**s**)" button to load multiple video or audio files from your PC. Or clip the video or audio into several segments with the built-in video editor.

Step 2: Turn the "Join All files" button to ON.

Or right-click the track view panel and select "Merge All Files".

Step 3: Choose an output format and click the "**Convert Now!**" button to start merging videos into one.

Part 3: Crop Video

Step 1: Click icon on the track view panel to enter the "**Video Editor**" window.

-	米津玄師「海	「の幽霊」				OPUS 48 KHz 0 Kbps 2 CH		1	s %	*	+ 😣
	b 00:04:15.3	Ħ H264	1920x1080 23 FPS	> 🚱	۲	OPUS 48 KHz 0 Kbps 2 CH	•	🗭 No	Subtitle	-	

Step 2: You can use the crop tool in the preview area to visually adjust the dimensions of the cropped area, and you can see the original preview and output preview window as shown below.

Or from the left toolbar, you can set Crop Area Size and the Position of Crop Area to crop the video. And you can click "**Restore Defaults**" to restore all the default settings of a video.

Step 3: Click "**Apply**" to enable the setting and click "**OK**" to return to the main window. To save the cropped video, you can choose an output format and convert the cropped videos.

Part 4: Flip or Rotate Video

Step 1: Click icon on the track view panel to enter the "**Video Editor**" window.

/ 米)	津玄師「海の幽霊」 00:04:15.3 📙 H264 1920:1080 23 FPS > 🏵 🐠 OPUS 48 KHz 0 Kbps 2 CH 🝷 🗩	s %	*	+ 😣
	00:04:15.3 🚦 H264 1920x1080 23 FP5 🗦 🏵 🐠 OPUS 48 KHz 0 Kbps 2 CH 💌 🗩	No Subtitle	•	

Step 2: From the rotation options, you can flip your video horizontally or vertically with just a few clicks.

Step 3: Click "**Apply**" to enable the setting and click "**OK**" to return to the main window. To save the rotated video, you can choose an output format and convert it.

Part 5: Apply Effects to Video

Step 1: Click icon on the track view panel to enter the "**Video Editor**" window.

Step 2: From the video editing window, click the **Step 2:** From the video effects including Brightness, Contrast, Saturation. And on the **Other Effects** section, you can select a filter to apply to your video. You can preview the effect on the lower window.

Step 3: Click "**Apply**" to enable the setting and click "**OK**" to return to the main window. Finally, you can choose an output format and convert it to export the edited video.

Step 1: Click icon on the track view panel to enter the "**Video Editor**" window.

メントン・ション・ション・ション・ション・ション・ション・ション・ション・ション・ショ					s %	+ 😣	
00:04:15.3	H264 1920x1080 23 FPS	> 😵 🖜	OPUS 48 KHz 0 Kbps 2 CH	• 🕫	No Subtitle	•	

Step 2: From the video editing window, click the tab. From there, you can add the text watermark or image watermark to your video.

If you want to add text watermark, choose **Text** and type the text to the blank. Click the "**T**" icon to adjust the text font, style, size, effects, and color. You can also move the text watermark to anywhere in the video by dragging and moving the text.

Automatically open the output folder after converting finished -- Check and the output folder will open automatically for you to locate the output file after converting.

2. Folder for Storing Snapshots

Browse -- Click the "**Browse**" button to change the location where the snapshots to be saved.

Open -- Click the "**Open**" button to open the output folder storing snapshots.

3. Conversion

The number of simultaneous video conversion -- You can choose the number of simultaneous video conversion. The more you use, the more CPU the program will use to convert the simultaneous video at the same time.

CPU Kernel use numbers – You can change the number of the CPU kernel to enable the program to fully or partially use the CPU for video conversion.

4. Localization

Choose your preferred language by scrolling down the menu and click "OK" to confirm. After you set it successfully, the program interface language would be changed to your chosen language right away.

5. Change App Size

Change the size of the app to Auto, 100%, 125%, 150%, 175%, 200% according to your computer's display resolution (DPI).

Options > Video

Click the button at the upper right corner of the main window, and choose "Video" tab:

Options						×		
General	Video	Audio	Online Video	Subtitles	Misc.			
Video Resize Fit to widt Expand to Output Driver				Fit to height Round to 16 pix	els			
 Default Encode Filters Deinterlact 		3D SI		SPU				
	MP4 Faststart Flatten and add faststart to MP4 files							
di:	tion ere is no NVIDIA sabled. se Intel QSV for H2		AP		not present, AMF	acceleration is		
		ОК		Cancel				

1. Video Resize

Here you can resize the video by fitting its width or height, expand to video size, or round to 16 pixels.

If you merge videos, please deselect these four options.

If you change the frame size, you can tick these options according to remove black bars.

2. Output Driver of Video Player

There are four options (Default, Direct3D, SDL, GPU) to choose the output driver of the video player you prefer.

3. Encoder Filters

Check the Deinterlace option to enable the deinterlace feature. Deinterlacing is the process of converting interlaced video, such as common analog television signals or 1080i format HDTV signals, into a non-interlaced form.

4. MP4 Faststart

Flatten and add faststart to MP4 files -- Check Flatten and add faststart to MP4 files, you can produce MP4 files to upload to an online video-sharing website, and the video will be played right away before the entire video has been downloaded from the website. For MP4 Faststart fixes the files so they can be streamed. It adjusts the MP4's metadata to allow for Flash players to play them right away (Fast Start), while it is downloaded from the website.

5. GPU Acceleration

These are three accelerated measures to get a faster and better-converting experience.

NVIDIA NVENC/CUDA technology can encode full HD videos up to 8X faster than real-time and leverage the power of the GPU to the maximum.

OpenCL Hardware Acceleration makes AMD APP work with CPU to complete video compression which can greatly reduce the compression time.

Inter QSV allows much more power-efficient video processing and quick transcoding.

Please note that the option can be checked only if your computer video card supports it.

Options > Audio

Click the button at the upper right corner of the main window, and choose "Audio" tab:

Options								×
General	Video	Audio	Onlin	e Video	Subti	tles	Misc.	1
Audio Volume Volume control:		-			0	db		
AAC Parameters								
MPEG Type:	MPEG-2		MPEG-4					
Object Type:	Main		LC		SSR		LTF	þ
– MP3 Parameters: Encode: MP3 Volume:	CBR • Default •	VBR Quali Audio Qu		4 - Middle Default				
		ОК			с	ancel		

1. Audio Volume

Volume control -- Here you can adjust the audio volume in the converted files.

Volume normalize -- If the audio sound in your output file is fluctuating, check this option to make the sound as flat. It can make sound normalization.

2. AAC Parameters

MPEG Type -- Here you can choose MPEG-2 or MPEG-4. (MPEG4-AAC == MPEG2-AAC + PNS tool + AAC Long Term Prediction profile (AAC LTP))

Object Type -- Here you can choose Main, LC, SSR, or LTP.

(AAC encoding methods are organized into Profiles (MPEG-2) or Object Types (MPEG-4). These different Object Types are not necessarily compatible with each other and may not be playable with various decoders. Some of the various Object Types are:

- * MPEG-2 AAC LC / Low Complexity
- * MPEG-2 AAC Main
- * MPEG-2 AAC SSR / Scalable Sampling Rate
- * MPEG-4 AAC LC / Low Complexity
- * MPEG-4 AAC Main
- * MPEG-4 AAC SSR / Scalable Sampling Rate
- * MPEG-4 AAC LTP / Long Term Prediction
- * MPEG-4 AAC HE / High Efficiency
- * MPEG-4 AAC LD / Low Delay

Different Object Types vary in complexity. Some take longer to encode/decode as a result of the different complexities. Furthermore, the benefits of the more complex profiles are often not worth the CPU power required to encode/decode them. As a result, the Low Complexity/LC Object Type has become the profile used by most encoders and supported by most decoders. However, the High Efficiency (HE) Object Type has become more popular recently with its addition to the Nero AAC encoder.

Currently, all players support the LC Object Type, although some will work on only MPEG2 or MPEG4 streams. Players based on the FAAD2 decoder (eg. foobar2000, Winamp plugins) support almost all Object Types including HE AAC. 3ivX also supports all Object Types except SSR.

3. MP3 Parameters

Encode -- Here you can choose CBR, ABR or VBR-1,2,3,4.

(* CBR is useful for people who are concerned about maintaining maximum compatibility, especially with certain streaming applications and some hardware-based decoders that don't reliably support VBR. It is also useful for people who desire the ability to obtain accurate estimates of the bitrate or approximate duration of a file's decoded audio without scanning and partially decoding the entire file.

* ABR encoding is desirable for users who want the general benefits of VBR (an optimum bitrate from frame to frame) but with a relatively predictable file size as they would get with constant bitrate (CBR), and a greater preference for bitrates that are near the desired target. Inevitably, some frames will be encoded with more bits than necessary, but the result will always be equal to or better than that of CBR for the target bitrate.

* In Variable Bitrate (VBR) coding, the user chooses the desired quality level and/or a range of allowable bitrates. Then the encoder tries to maintain the selected quality during the whole stream by choosing the optimal amount of data to represent each frame of audio. The main advantage is that the user is able to specify the quality level and conserve as much space as possible, but the inconvenience is that the final file size is quite unpredictable.)

VBR Quality -- You need to choose the VBR in the Encode option, otherwise, this option is gray.

MP3 volume -- Here you can adjust the mp3's volume.

Audio Quality -- Here you can adjust the audio quality.

Options > Online Video

Click the button at the upper right corner of the main window, and choose "Online Video" tab:

Options						X

1. Account of YouTube Video

Username & Password -- Enter your Username and password for YouTube here in order to download videos within the converter.

2. Account for Nico Video

Username & Password -- Enter your Mail Address and password for NicoVideo here in order to download videos within the converter. (Nico Video is a popular video-sharing website in Japan managed by Niwango.)

3. Account for Facebook Video

Username & Password -- Enter your Username and password for Facebook here in order to download videos within the converter.

4. Select Format

Here you can choose the output video format to be Manually Select, Best Quality, and Smallest File Size according to actual needs.

5. Maximum number of retries

The number of retries means how many times the program tries to download the video from the Internet when having download problems.

6. Use HTML Title as output file name

Check this option to save the downloaded YouTube video in a recognizable character name.

7. Proxy Server and Port

Input proxy server and port manually to access the YouTube website in case of not viewing YouTube videos successfully in your country.

8. Automatically add URL in the clipboard

Check this option to copy the video URL into the clipboard.

Options > Subtitles

Click the button at the upper right corner of the main window, and choose "**Subtitles**" tab:

Options						×

67

1. Encoding

It is recommended to set "UTF-8 (UTF-8)" as the default format for subtitle encoding.

Default (Windows-1252)
Universal (UTF-8)
Universal (UTF-16)
Universal (big endian UTF-16)
Universal (little endian UTF-16)
Universal, Chinese (GB18030)

2. Position

Adjust the slide bar to change the position of the subtitles on the screen.

3. Size

Increase/Decrease scales of subtitles according to movie height, width, and diagonal. You can also change the subtitle scale as you wish from the Default Scale.

4. Color

Use the custom subtitles color and change the transparency.

5. Font

Please follow the directory C:\WINDOWS\Fonts\; you can choose your desired font; right click on the font name to choose Properties; copy and paste the font name, such as "ARIAL.TIF" to subtitle font option.

Options > Misc.

Click the button at the upper right corner of the main window, and choose "**Misc**" tab:

Options						×

Shut down computer after converting finished -- Check this option to shut down the computer when conversion finished.

Add video codec name into the output file name -- Check this option to add video codec, such asx264, x265, mpeg, xvid, to the output file name.

Check for the new version of the program when startup - Remind user when there is a new version available.

Preview HTML5 embed video in default browser after converting finished -- Check this option to preview HTML5 embed video in default browser after converting finished.

Export converted files to iTunes automatically -- Check this option to export converted files to iTunes after converting finished.

Preserve the timestamps for output file - Check this option to preserve the original capture time after a video is compressed.

Save transcode log file -- Check this option to save your program operation records.

Please remember to click "OK" if you need to confirm the action.
